KONICA MINOLTA | All Covered
IT SERVICES FROM KONICA MINOLTA

DEPLOYMENT SERVICES

Desktops, laptops, tablets, smartphones, and specialty devices abound in today's work environments. Most workers have more than one device and it can be overwhelming for organizations to manage the procurement, configuration design, provisioning, and asset management tasks that are required to enable their workforce with the technology tools they need. The deployment process is complex, time consuming, and challenging. All Covered's Deployment Services can make all the difference in helping to overcome those challenges.

Our configuration center offers 30,000 square feet of climate-controlled, secure-storage for inventory management, imaging, provisioning, and asset control. With this facility, we have the capacity to image and process in excess of 2,000 devices per day across different platforms (Windows, Apple, Chrome) depending on requirements.

We've deployed over one million devices for our customers. Whether you need new devices, upgrade services, or complete lifecycle management, our Deployment Services team has you covered.
